Benjamin Johnston

(614) 843-3974 | bejaunst@gmail.com | linkedin.com/in/bejaunst | github.com/cetio | cetio.github.io

Technical Skills

Languages: C#, C, D, Python, JavaScript, TypeScript, Ruby, SQL
Backend & APIs: REST APIs, OAuth 2.0, WebSocket, JSON Schema, SDK Design, Type-Safe APIs, HTTP Orchestration, Rate Limiting, Backward Compatibility
Infrastructure: Docker, CI/CD, GitHub Actions, Git, Linux, LLM Integration, Tool Calling, MCP

Experience

Software Engineer Jul 2021 – Present
Independent client engagements

- Designed and maintain 10+ cross-platform open-source SDKs across D, C#, C, and C++ (700+ commits), including LLM, Google, Webull, and Selenium SDKs with OAuth 2.0 and typed APIs.
- Contributed 120 commits to fern-pl/fnc (Fern Native Compiler), serving as the second-highest contributor to an upstream compiler project.

Automation Engineer Nov 2025 – Present
Handshake

- Eliminated 95% of manual effort across 400+ runtime hours by building AutoHandshake!, a Ruby/JavaScript Selenium RPA suite with unattended execution, UI-stall recovery, and multi-tab orchestration.
- Evaluated 4,000+ multimodal LLM responses for correctness and reasoning quality; evaluated LLM quality on coding tasks using head-to-head model comparisons and benchmark evaluations.

AI Evaluation Engineer Dec 2025 – Jun 2026
Snorkel AI

- Validated task solutions and training-set integrity via Docker-based CI/CD sandboxes, catching defects pre-release and feeding red-team findings into model alignment.

Selected Projects

Intuit | *LLM SDK, D* | github.com/cetio/intuit

- Developed the first native LLM SDK for D with 3 provider integrations (OpenAI, Claude, Qwen), OpenAI-compatible routing for OpenRouter and LiteLLM, and 10 example applications from RAG to multi-agent debates.
- Mapped native D functions as model tools via automatic JSON schema generation, with configurable-precision embeddings and typed API responses.

Conductor | *HTTP & OAuth Library, D* | github.com/cetio/conductor

- Constructed a D library providing HTTP, OAuth 2.0 PKCE, serialization, and network orchestration utilities for API integrations without pulling in a large framework.
- Automated OAuth token lifecycle with caching and revocation, rate-limited request dispatch, and reflection-driven JSON serialization for framework-free API integrations.

Google-SDK | *Google APIs Client, D* | github.com/cetio/google-sdk

- Built a D SDK for Google Drive and Gmail APIs with OAuth session management, automatic pagination, exponential backoff retry, and 401-triggered token refresh.
- Implemented multipart upload, 6 typed exception classes, and rich domain objects (File, Folder, Message, Thread, Label) across 15+ API endpoints.

Webull-SDK | *Financial API Client, D* | github.com/cetio/webull-sdk

- Developed a D SDK for Webull OpenAPI with HMAC-SHA1 request signing, MFA-aware token lifecycle management, and runtime API permission detection across 6 security types.
- Delivered 5 market data endpoints (OHLCV bars, snapshots, L2 order books, tick records, footprint analysis) with typed domain modeling.

Education

Columbus State Community College Expected Dec 2026
AAS, Software Development
