EXPERIENCE

AI Operations Engineer (RPA & Model Evaluation)

Nov 2025 – Jun 2026

Handshake — Contract

Remote

- Cut manual annotation and triage effort by 95% across 400+ contractor hours by building AutoHandshake!, a Selenium-driven automation suite with UI-stall recovery, multi-tab orchestration, and full audit trails.
- Evaluated 4,000+ multimodal AI responses against structured quality rubrics for correctness and reasoning, earning the Handshake Model Validation 2 — Expert credential.
- Trained contractors on platform workflows and rubric interpretation, raising evaluation consistency team-wide.

Expert Contributor

Dec 2025 – May 2026

Snorkel AI — Contract

Remote

- Shaped constraint-based training pipelines for Claude and ChatGPT across two contracted projects targeting complex programming and logic reasoning.
- Ran CI/CD validation in Docker to catch defects pre-release and protect training-set integrity.

Freelance Software Engineer

Jul 2021 – Present

Independent client engagements

Remote

- Delivered SDKs, automation tooling, and API integrations for individual clients, including an AI-assisted grading platform with LMS OAuth that reached ~95% grading accuracy and cut instructor workload in half.
- Eliminated a user-mode virtual-input layer from a device-integration pipeline, removing its overhead from the execution path entirely.

SELECTED PROJECTS

Selenium | *D* | github.com/cetio/selenium

2026 – Present

- Authored the only Selenium WebDriver client for D: comprehensive, fully documented, and W3C-compliant, with typed APIs, driver auto-detection, and full session lifecycle management.
- Powers real automation workloads, including AutoHandshake!, with production-grade coverage across clicks, input, forms, and JavaScript execution.

Intuit | *D* | github.com/cetio/intuit

2025 – Present

- Designed a Pydantic-inspired LLM SDK mapping chat completions, structured output, streaming, and tool calls onto native D types, avoiding a new stack syntax to learn.
- Supports OpenAI, Claude, Qwen, OpenRouter, and local models through one extensible routing layer.

Google-SDK | *D* | github.com/cetio/google-sdk

2026 – Present

- Unified Drive, Docs, Sheets, and Gmail access behind one client with OAuth session handling and typed errors for auth, permission, and rate-limit failures.
- Automated MIME detection and native Docs/Sheets export, removing boilerplate from Google API integrations.

Insurgent: Client | *D, JavaScript*

2026 – Present

- Built a real-time companion client rendering 10,000+ map tiles and 5,000+ units through live WebSocket feeds in under a second.
- Combined Selenium-driven data capture with a responsive live dashboard as a solo-developed, full-stack system.

TECHNICAL SKILLS

Languages: C#, D, Python, Ruby, JavaScript, SQL, C, C++, x86 Assembly

Automation & Quality: Selenium, WebDriver, browser automation, test design, CI/CD, Docker, structured evaluation, audit trails, failure recovery

Software Engineering: REST APIs, OAuth 2.0, SDK design, WebSockets, HTML parsing, JSON Schema, LLM integration, Git, CMake, Linux

EDUCATION

Columbus State Community College

Expected Dec 2026

AAS, Software Development

Columbus, OH

Certifications: Handshake Model Validation 2 — Expert (AI response evaluation across 4,000+ multimodal samples)
