EXPERIENCE

Software Engineer, Self-Employed

Jul 2021 – Present

- Maintain 10+ public open-source libraries across multiple ecosystems, spanning SDKs, developer tooling, RPA, and systems programming.
- Built an AI-assisted grading platform with LMS OAuth integration and automated rubric application, reaching ~95% accuracy in real classroom use and cutting instructor grading time in half.
- Developed tools for directly integrating with web apps and device I/O, facilitating third party automation for Razer devices and reducing Windows virtual input overhead by 100%.

RPA Engineer & Model Evaluator, Handshake · Contract

Nov 2025 – Jun 2026

- Built AutoHandshake!, a Selenium-based automation suite that eliminated 95% of manual annotation and triage effort across 400+ contractor hours through unattended execution, failure recovery, and audit trails.
- Evaluated 4,000+ multimodal head-to-head tasks against structured rubrics for response quality, reasoning accuracy, and domain understanding; earned the Model Validation 2 — Expert credential.
- Mentored contractors on platform operations, rubric interpretation, and efficient evaluation workflows.

Expert Contributor, Snorkel AI · Contract

Dec 2025 – May 2026

- Engineered constraint-based training workflows across 2 major contracted projects, training Claude and ChatGPT models on complex programming and logic tasks.
- Executed comprehensive CI/CD testing and validation protocols via Docker containers, ensuring robust deployment stability and training set quality.
- Designed rigorous evaluation frameworks to systematically assess model reasoning capabilities, driving continuous improvements in code generation and logical deduction accuracy.

OPEN SOURCE PROJECTS

Selenium-SDK — Author & Maintainer | D

2026, [GitHub](#)

- Authored and maintain the de facto (#1), W3C-compliant Selenium WebDriver library for D, published on the DUB package registry: a strongly typed browser-automation API with driver auto-detection, implicit wait synchronization, and full session lifecycle management.

Chemica | D, GTK4

2026, [GitHub](#)

- Built a cross-platform desktop app for exploring chemical compounds with interactive 3D molecular visualization, unifying several scientific databases behind one interface with a local AI layer that merges overlapping entries.

Insurgent: Client | D, JavaScript

2026

- Developed a full-stack real-time companion client for an online strategy game that parses and renders 5,000+ buildings and units, 10,000+ map tiles, and gigabytes of live data with lazy caching over live WebSocket feeds.

Intuit | D

2026, [GitHub](#)

- Designed a LangChain-comparable LLM SDK with chat completions, streaming, batch embeddings, and tool usage as strongly typed native structures, supporting OpenAI, Claude, Qwen, and local models via OpenRouter and local routing.

TECHNICAL SKILLS

Languages: C#, D, C, Python, Ruby, JavaScript, SQL, C++, x86 Assembly

Tools & Frameworks: Selenium / WebDriver, GTK4, Node.js, Git, CMake, CI/CD, Linux

Concepts: REST APIs, OAuth 2.0, SDK design, browser automation, LLM integration & evaluation, performance optimization

Practices: Agile, Kanban, Test-Driven Development, Code Review, Open Source Contribution

EDUCATION & CERTIFICATIONS

Columbus State Community College — AAS, Software Development

Expected Dec 2026

Certifications: Handshake Model Validation 2 — Expert; GitHub Foundations (PMI); Microsoft Career Essentials (Generative AI, Software Development, Azure AI, Security); SQL Programming
