

Benjamin Johnston

Software Engineer | QA Automation & Test Engineer

Columbus, OH | (614) 843-3974 | bejaunst@gmail.com | linkedin.com/in/bejaunst | github.com/cetio | cetio.github.io

Software engineer and QA automation specialist with experience building Selenium-based workflow automation, SDKs, API integrations, and evaluation systems. Delivers maintainable, testable software across C#, D, Python, Ruby, JavaScript, C, and C++ with hands-on experience in CI/CD, browser automation, REST APIs, OAuth 2.0, and structured quality evaluation.

EXPERIENCE

AI Operations Engineer (RPA & Model Evaluation) | Handshake — Contract Nov 2025 – Jun 2026

- Built AutoHandshake!, a Selenium-based RPA suite that eliminated 95% of manual annotation and triage effort across 400+ contractor hours through unattended execution, UI-stall recovery, multi-tab coordination, and auditable workflows.
- Evaluated 4,000+ multimodal AI responses against structured rubrics for correctness, reasoning, and domain understanding; earned the Handshake Model Validation 2 — Expert credential.
- Mentored contractors on workflow operations, rubric interpretation, and efficient evaluation practices.

Expert Contributor | Snorkel AI — Contract Dec 2025 – May 2026

- Designed constraint-based training workflows and evaluation criteria across two contracted projects for complex programming and logic tasks.
- Executed CI/CD validation in Docker-based environments, identifying quality issues before delivery and supporting reliable training-set releases.

Freelance Software Engineer | Independent client engagements Jul 2021 – Present

- Delivered individually scoped, client-authorized open-source and proprietary software across developer SDKs, workflow automation, API integration, and device I/O.
- Built an AI-assisted grading platform with LMS OAuth integration and automated rubric application, reaching approximately 95% accuracy in classroom use and reducing instructor grading time by half.
- Engineered direct device-integration tooling that removed user-mode virtual-input layers from the execution path, eliminating their associated overhead.

SELECTED PROJECTS

Selenium | D | github.com/cetio/selenium

- Developed the sole Selenium WebDriver library for D: a comprehensive, fully documented, W3C-compliant client with typed APIs, driver auto-detection, wait synchronization, browser options, JavaScript execution, and complete session lifecycle management.

Intuit | D | github.com/cetio/intuit

- Built a Pydantic-inspired LLM SDK that maps chat completions, structured output, embeddings, streaming, and tool calls to native D types; supports OpenAI, Claude, Qwen, OpenRouter, and local models through extensible routing.

TECHNICAL SKILLS

Languages: C#, D, Python, Ruby, JavaScript, SQL, C, C++, x86 Assembly

Automation & Quality: Selenium, WebDriver, browser automation, test design, CI/CD, Docker, structured evaluation, audit trails, failure recovery

Software Engineering: REST APIs, OAuth 2.0, SDK design, WebSockets, HTML parsing, JSON Schema, LLM integration, Git, CMake, Linux

EDUCATION

Columbus State Community College — AAS, Software Development

Expected Dec 2026

Credential: Handshake Model Validation 2 — Expert
